

## 例题

如图所示,两木块质量分别为 $m_A=1.0$ kg, $m_B=2.0$ kg。A、B间的摩擦系数 $\mu_1=0.20$ 。B与桌面的摩擦系数 $\mu_2=0.30$ 。若木块滑动后它们的加速度大小均为0.15m·s<sup>-2</sup>。求作用在B物上的拉力?

解:对研究对象进行受力分析

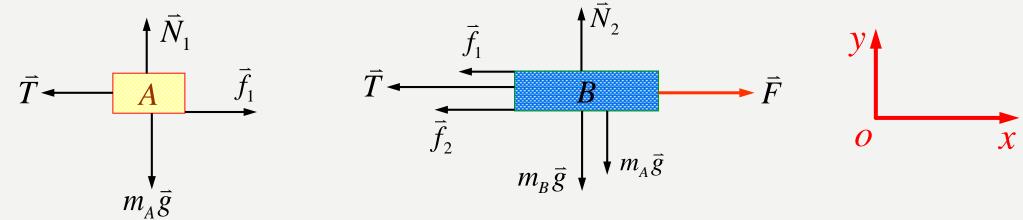

隔离物体 分别分析 不重不漏

## 例题

$$A: f_1 - T = -m_A a$$
  $B: F - f_1 - f_2 - T = m_B a$   $N_1 - m_A g = 0$   $N_2 - N_1 - m_B g = 0$   $f_1 = \mu_1 N_1$   $f_2 = \mu_2 N_2$ 

由A式: 
$$\mu_1 m_A g - T = -m_A a$$

由B式: 
$$F - \mu_1 m_A g - \mu_2 (m_A + m_B) g - T = m_B a$$
